

At Dickie Direct our mission is to improve the production, profitability, and environmental sustainability of New Zealand farms by using the most efficient nutrient forms in conjunction with soil biology enhancing additives.

Liquid Ammo27 is made up of a high concentration of ground urea and crystal ammonium sulphate dissolved into fish emulsion, brown kelp, fulvic acid and EM fert enhance solution. The result is a biologically activated high analysis liquid N and S product that can be applied through a standard spray boom and nozzles.

Plus fish emulsion, brown kelp, fulvic acid and EM fert enhance solution.

At Dickie Direct we recommend using Liquid Ammo27 in the below circumstances:

Throughout the cooler months when solid nitrogen forms have often lost efficiency due to decreased biological activity in the soil.

In periods of higher nitrogen fertiliser costs – Application costs of liquid N tend to be higher compared to solid forms. However, the increased efficiency of liquid N compared to solid N will outweigh the higher application costs, especially in periods of higher fertiliser costs.

In instances when there is a sprayer going over a crop/pasture. Liquid Ammo27 will enhance the uptake and efficiency of other chemicals while also offering an efficient nitrogen response and biological boost to the soil and plant.

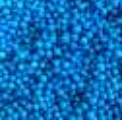

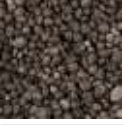

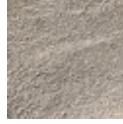

When there is a need to reduce nitrogen inputs. Applying nitrogen to the leaf alongside biological enhancers will increase the N efficiency and therefore the amount of N that needs to be applied.

When sulphur is a limiting factor to nitrogen response. This is generally in cooler/wetter periods when available Sulphate has been leached and the soil is not efficiently mineralising organic sulphur into plant available sulphate.

PRODUCT RANGE

	46% N 0 K 0 Ca	0 P 0 S 0 Mg		Urea
	36.3% N 0 K 1.75% Ca	0 P 4.8% S 0 Mg		Bio-N Supercharged Urea
	25.3% N 0 K 1.75% Ca	0 P 15.1% S 0 Mg		Bio-N Ammo
	44% N 0 K 0 Ca	0 P 0 S 0 Mg		Polymer-coated (90 Day Release) Urea
	32% N 0 K 0 Ca	0 P 0 S 0 Mg		Urea Ammonium-Nitrate 32 (UAN-32)
	21% N 0 K 0 Ca	0 P 24% S 0 Mg		Caprolactam Ammonium Sulphate (Dissolvable)
	17% N 0 K 0 Ca	20% P 1.5% S 0 Mg		DAP
	0 N 0 K 16% Ca	20% P 1.5% S 0 Mg		Triple Superphosphate
	0 N 0 K 32% Ca	12.7% P 1% S 0 Mg		DDPhos (Fine Particle Granulated RPR)

	0 N 50% K 0 Ca	0 P 0 S 0 Mg		Potassium Chloride (Potash)
	0 N 30% K 8% Ca	1% P 8.5% S 2.4% Mg		Phosta K (Potassium Sulphate/Carbonate)
	0 N 0 K 0 Ca	0 P 90% S 0 Mg		Sulphur 90S
	0 N 0 K 0 Ca	0 P 18% S 16% Mg		Kieserite (Magnesium Sulphate)
	0 N 0 K 0 Ca	0 P 0 S 27.5% Mg		Magnesite (Magnesium Carbonate)
	0 N 0 K 0 Ca	0 P 0 S 0 Mg		Ag Salt
	0 N 0 K 36% Ca	0 P 0 S 0 Mg		Ag Lime
				EM Fert Enhance A solid microbial inoculant that increases biological soil activity and enhances fertiliser efficiency.
				Humate Humates stimulate microbial activity within the soil, increasing bacteria and fungi levels.

We supply and blend the complete range of trace elements | All fertiliser blends are available for delivery in either bulk or bulk bags

BULK BLEND CALCULATOR

Use the Dickie Direct Bulk Blend Calculator to build, compare and order your next fertiliser blend, as well as to get an overview of the complete range of Dickie Direct products and wholesale prices.

To use the calculator simply visit www.dickiedirect.co.nz
